NEW PRODUCT • BUILD IN PROGRESS

ENGINEERING PROJECTS DON’T FAIL BECAUSE OF DRAWINGS.

They fail when information gets lost.

Introducing QUALIGRAFO

Engineering • BIM • Documents • Evidence

FROM PROJECT INFORMATION TO PROJECT INTELLIGENCE

ONE PROJECT. TOO MANY PLACES.

The problem is not lack of information. It is disconnected information.

DRAWINGS

Revisions, markups, approvals

MODELS

Coordination, clashes, LOD

TASKS

Owners, due dates, blockers

RFIs

Questions, responses, decisions

QA/QC

Checks, NCRs, evidence

HANDOVER

As-builts, O&M, assets

When these sit in separate systems, context disappears.

QUALIGRAFO CONNECTS THE PROJECT LIFECYCLE

Not just a document repository. A controlled engineering workflow.

NOT EVERY PROJECT IS THE SAME.

Qualigrafo starts by understanding the industry and facility.

⚡

ENERGY & HIGH-TECH

Solar • Renewable • Semiconductor

→

H

HOSPITAL / HEALTHCARE

General • Multi-speciality • Diagnostic

→

Rx

PHARMA INDUSTRY

API • Sterile • Biologics • Cleanroom

→

B

COMMON / OTHER

Residential • Commercial • Data Center • Industrial

→

THEN: WHAT ARE WE ACTUALLY DOING?

The same facility can require different workflows.

DESIGN ONLY

Calculations • Drawings • Schedules • GFC/IFC

BIM ONLY

Models • LOD • Coordination • Clash • COBie

DESIGN + BIM

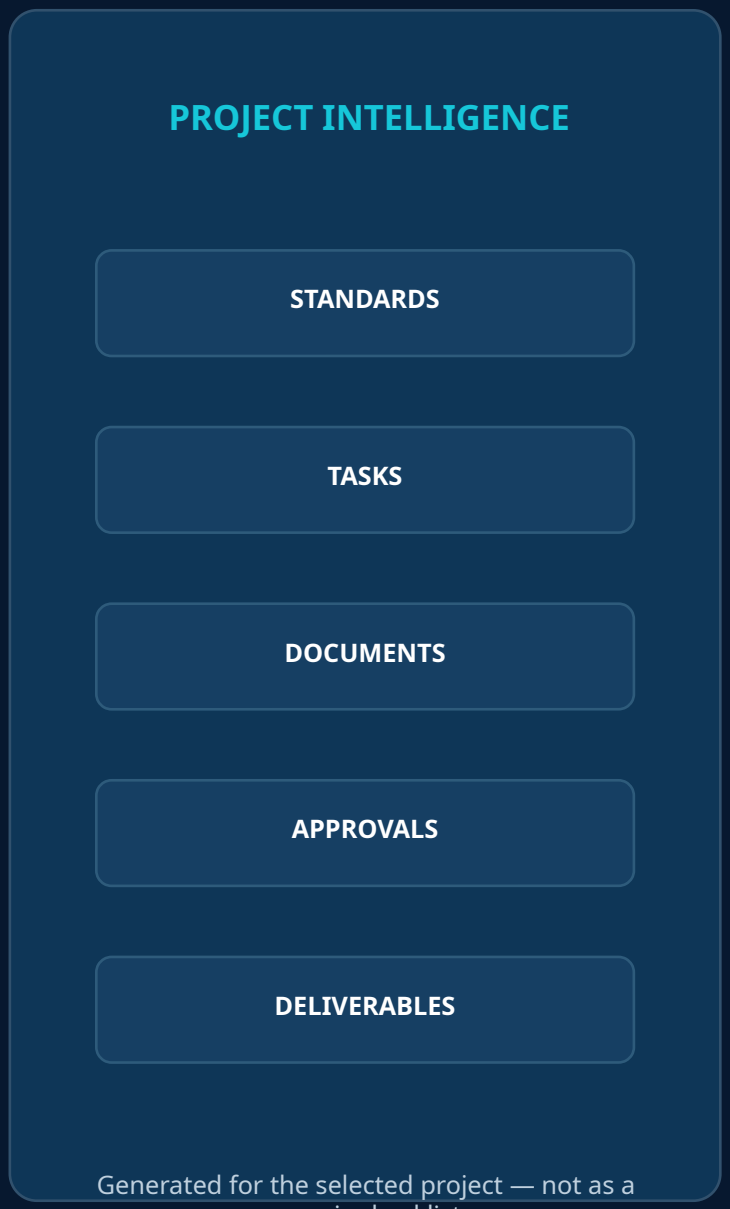

Engineering and BIM in one connected workflow

One project setup. Different logic loaded automatically.

THE WORKSPACE ADAPTS TO THE PROJECT

Industry + Facility + Service + Discipline + Stage + Country

- Required documents
- Required drawings
- Design calculations
- BIM requirements
- Approval stages
- QA/QC checklists
- Typical RFIs / issues
- Deliverables
- Handover requirements

Generated for the selected project — not as a generic checklist.

REVISION CONTROL THAT KNOWS THE DIFFERENCE

A working version is not the same as a formal issued revision.

VERSION

Internal working iteration

Can change before formal issue

REVISION

Controlled formal issue

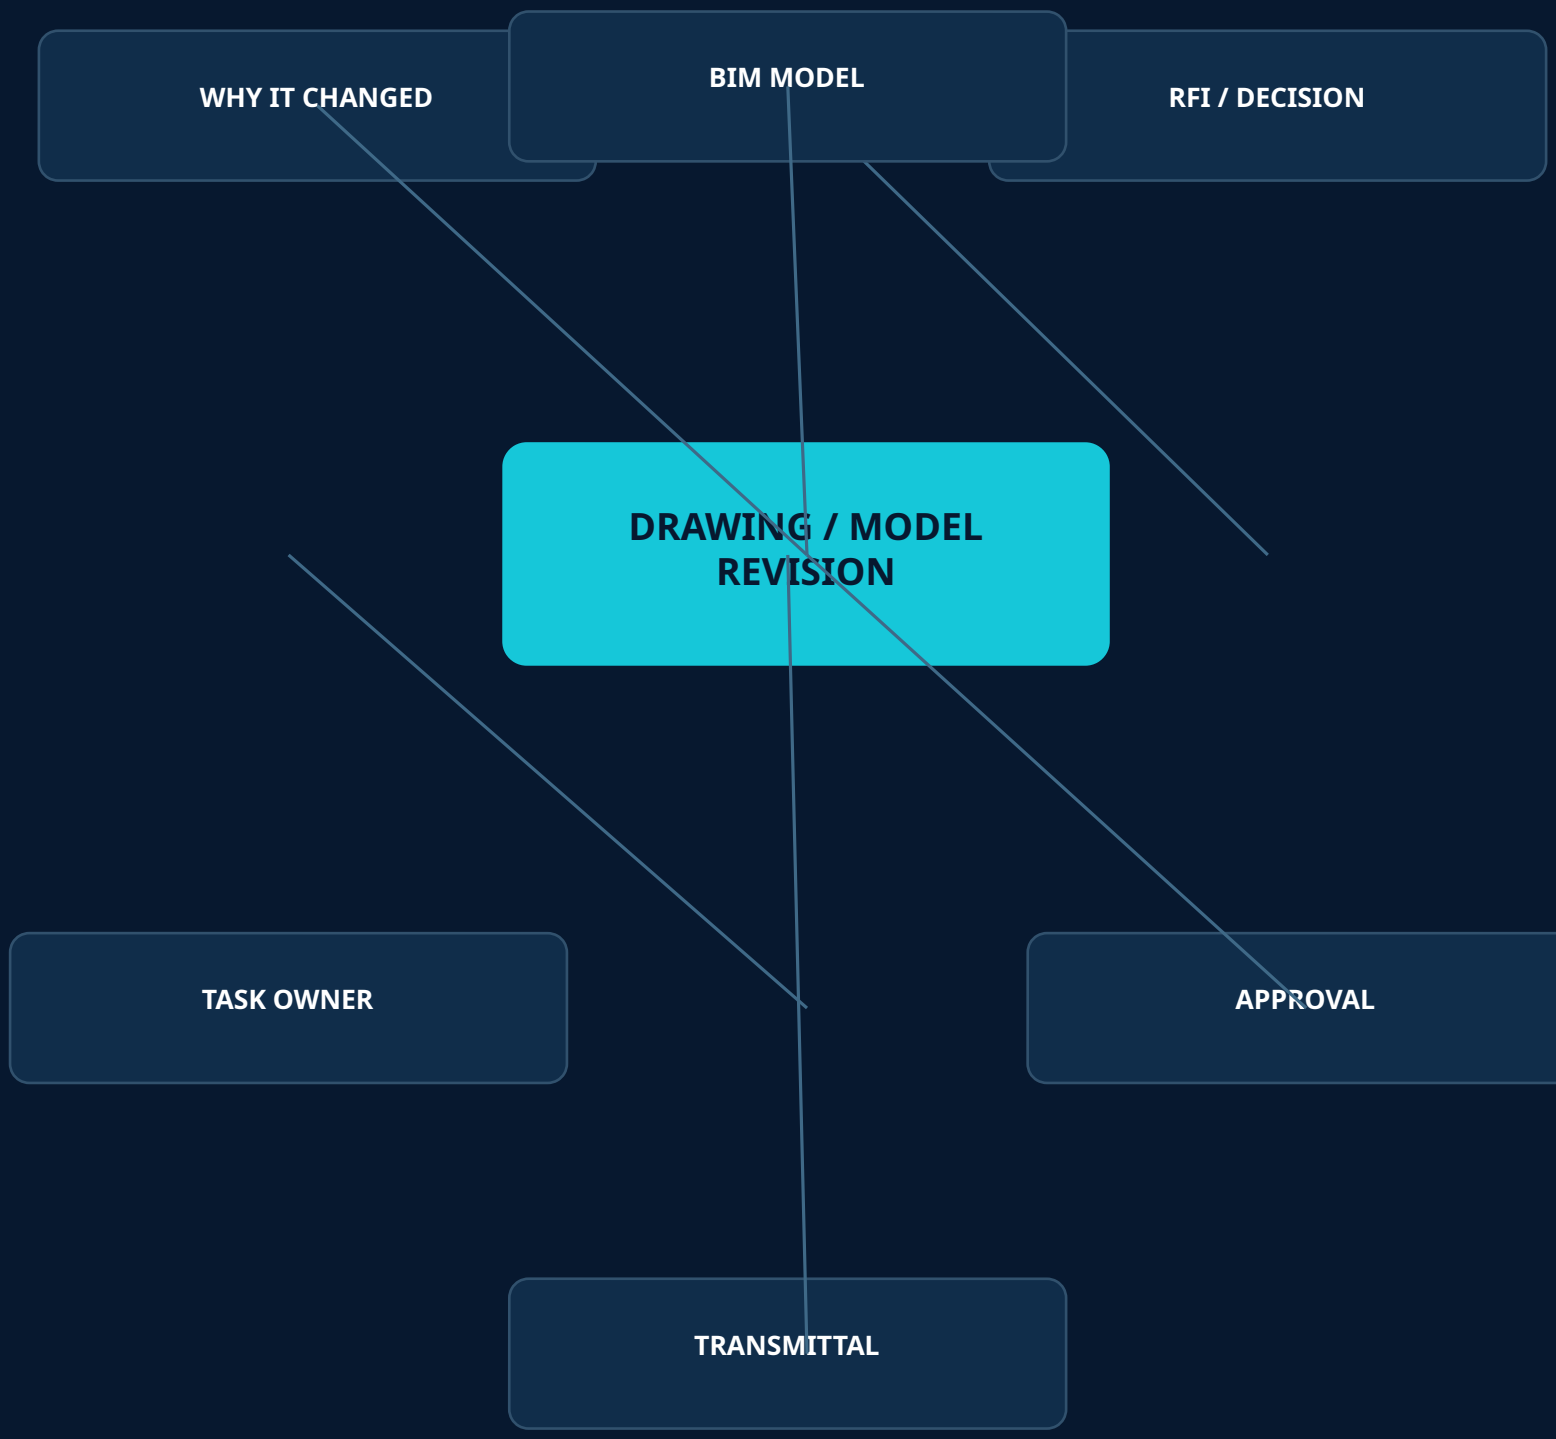

New record • Never overwrite approved history

Every formal revision can store:

- Previous revision
- Change summary / reason for issue
- Prepared • Checked • Approved
- Linked RFI / Change / Task
- Transmittal / issue history
- Superseded record retained

EVERYTHING SHOULD BE CONNECTED

A drawing revision should never exist without context.

FROM FIRST TASK TO FINAL HANDOVER

One controlled chain from execution to acceptance.

- Tasks
- Documents
- BIM Models
- RFIs / Issues
- Approvals
- Changes
- QA/QC
- Submittals
- Commissioning
- As-Builts
- O&M / Assets
- Final Dossier

HANDOVER COMPLETE = mandatory records approved or formally waived

BUILT FOR COMPLEX PROJECTS

One control engine. Different industry intelligence.

PHARMA — Validation • Qualification • Cleanroom

HEALTHCARE — Medical Gas • OT/ICU • Equipment

RENEWABLE — PV • BESS • Grid • SCADA

SEMICONDUCTOR — Cleanroom • Tool Hook-up • Process Utilities

BUILDINGS — Architecture • Structure • MEP • Handover

WHAT WE WANT QUALIGRAFO TO ANSWER

The next layer is project intelligence, not just storage.

“What is pending for this submission?”

“Which drawings are waiting for approval?”

“What changed between revisions?”

“What is required for LOD 400?”

“What is missing for final handover?”

BUILD IN PUBLIC • PRODUCT DEVELOPMENT

QUALIGRAFO

FROM PROJECT INFORMATION TO PROJECT INTELLIGENCE

Engineering • BIM • Documentation • Compliance • Handover

We are building it now.
Follow the journey.

What is the biggest documentation or coordination problem your team faces today?
